

## Climate Change Policy

At Brim Chargers, we recognise the urgent need to address climate change and its impact on our planet. As a leading provider of electric car charging solutions, we are committed to taking decisive action to mitigate climate change and promote environmental sustainability. Our Climate Change Policy outlines our commitment to reducing greenhouse gas emissions, fostering innovation, and contributing to a low-carbon future.

### Reduction of Greenhouse Gas Emissions:

We are committed to reducing our greenhouse gas emissions across all aspects of our operations. This includes minimising emissions associated with the manufacturing, installation, and operation of our electric car charging infrastructure.

We will continuously assess and implement measures to improve energy efficiency and reduce carbon emissions throughout our supply chain and business activities.

### Promotion of Clean Energy

We support the transition to clean, renewable energy sources and will prioritise the use of renewable energy in our operations wherever feasible.

We will collaborate with energy providers, government agencies, and other stakeholders to advocate for policies and initiatives that promote the adoption of renewable energy and accelerate the transition to a low-carbon economy.

### Innovation and Technology

We will invest in research and development to drive innovation in electric car charging technology and infrastructure. This includes exploring advanced charging solutions, energy storage technologies, and smart grid integration to optimise performance and reduce environmental impact.

We will actively seek out partnerships and collaborations with innovators, startups, and research institutions to leverage cutting-edge technology and accelerate the transition to sustainable transportation.

## Education and Advocacy:

We are committed to raising awareness about the importance of electric transportation and its role in combating climate change. Through educational initiatives, public outreach campaigns, and community engagement, we will empower individuals and organisations to make informed decisions that support sustainability.

We will engage with policymakers, industry associations, and advocacy groups to advocate for policies and regulations that support the growth of electric transportation and advance climate action efforts.

## Continuous Improvement and Accountability:

We will regularly monitor and evaluate our environmental performance to track progress towards our climate goals and identify areas for improvement.

We will maintain transparency and accountability by regularly reporting on our climate initiatives, emissions reductions, and sustainability efforts to stakeholders, including customers, investors, and the public.

At Brim Chargers, we are committed to being part of the solution to climate change. Through proactive measures, innovation, and collaboration, we will work towards a more sustainable future for generations to come.
